A computational study of cross-situational techniques for learning word-to-meaning mappings Jeffrey Mark Siskind* Department of Electrical Engineering, Technion, Ha-t-t 32000, Israel Abstract This paper presents a computational study of part of the lexical-acquisition task faced by

A computational study of cross-situational techniques for

study is restricted to analytical and computational methods. The foremost part of research is theoretical analysis by analytical equations. Then the theoretical analysis is compared with computational method using fluid flow computational tool to evaluate forces, tangential velocity,

A Computational Study of Sofas and Cars Philip Gibbs Abstract: There is a class of geometric problem that seeks to find the shape of largest area that can pass down a corridor of given form or turn round inside a given shape. A popular example is the moving sofa problem for a shape that can be moved round an L-shaped
