Monte Carlo methods are very important in computational physics, physical chemistry, and related applied fields, and have diverse applications from complicated quantum chromodynamics calculations to designing heat shields and aerodynamic forms as well as in modeling radiation transport for radiation dosimetry calculations. In statistical physics Monte Carlo molecular modeling is an alternative ...

I've found an article explaining how to perform Monte Carlo simulation on portfolio returns therefore calculating the Value At Risk (pdf attachment). I've followed all the instructions and implemented it in Excel (zip attachment). There are 3 main methods to estimate the VaR of a portfolio ...

Using Monte Carlo simulation to calculate Value At Risk

One major alternative to using hand-coded knowledge and searches is the use of Monte Carlo methods. This is done by generating a list of potential moves, and for each move playing out thousands of games at random on the resulting board.

Study design. To assess functional brain responses to cold stress, the participant underwent a fMRI paradigm on two separate days. On each day, the fMRI paradigm consisted of an oscillating whole body temperature challenge designed to generate periods of mild hypothermia interspersed by periods of return to basal core body temperature (see below).
