Adapting Genetics: Quantal Evolution After Natural Selection -Surviving the Changes to Come. Quantal refers to the partitioning of the genome into distributed polymorphic blocks. Regulatory DNA sequences, known as Ancestral Haplotypes, were rearranged during the successive retroviral epidemics which defined human ancestors.

of a quantum chromosome. Figure 3. Quantum chromosome structure. 3.2.2. Initializing the Population The easiest way to create the initial population is to initialize all the amplitudes of qubits by the value $1/(2^{n/2})$ [3]. This means that a chromosome represents all quantum superposition states with equal probability. 3.2.3.

Comparison of Genetic Algorithm and Quantum Genetic Algorithm

Scientists have long studied the genetic evolution of microbes, but until recently, it was possible to examine only a few strains at a time. Desai's team, in contrast, analyzed 640 lines of yeast that had all evolved from a single parent cell.

Genetic Algorithms and Quantum Computation Gilson A. Giraldi, Renato Portugal, Ricardo N. Thess — Abstract Recently, researchers have applied genetic algorithms (GAs) to address some problems in quantum computation. Also, there has been some works in the designing of genetic algorithms based on quantum theoretical concepts and techniques.

Intriguingly, this evolution of the molecular view toward the broader and more inclusive epigenetic view of the

gene has an intriguing, if not precise, parallel in the evolution of concepts of atomic physics from Newtonian mechanics to quantum mechanics that are interesting to consider.

the problems of Quantum Genetics and Molecular Evolution are considered in this article from the point of view of Quantum Automata Theory first published by the author in 1971 (Baianu, 1971a, b), and further developed in several recent articles (Baianu, 1977, 1983, 1987, 2004, 2011).

The Evolution of Aging 4 Science Abstract: In 1882 Weismann formally proposed that programmed aging was an evolved characteristic, an adaptation of organism design, which had an evolutionary purpose. Darwin had previously suggested that aging was an evolved characteristic despite conflicts with Darwinian evolutionary mechanics.

Natural selection is the only mechanism known to cause the evolution of adaptations, so many biologists would simply define an adaptation as a characteristic that has evolved by natural selection.
