Take your designs to the limit and beyond with 3M structural adhesives. With the ability to bond dissimilar (multi) materials, including aluminum and carbon fiber composites, you can use lighter and thinner materials for groundbreaking innovations in form and function. Recent advances in multi ...

The earliest use of adhesives was discovered in central Italy when two stone flakes partially covered with birch-bark tar and a third uncovered stone from the Middle Pleistocene era (circa 200,000 years ago) were found. This is thought to be the oldest discovered human use of tar-hafted stones. The birch-bark-tar adhesive is a simple, one-component adhesive.

Although there are some recent reviews on paper-based diagnostics (Parolo and Merkošiči, 2013, Yetisen et al., 2013), we here focus on the substrates and methods to design and fabricate paper-based microfluidics, the working principles and reaction mechanism of paper-based diagnostics, and most importantly, the latest advances in improving applications of paper-based diagnostics at the POC.

### **Advances in paper-based point-of-care diagnostics**

ABOUT THIS JOURNAL Welcome to the home page of Reviews of Adhesion and Adhesives (RAA) committed to publishing peer-reviewed and thought-provoking critical reviews written by subject matter experts covering all aspects of adhesion science and adhesive technology. Our aim is to publish your work efficiently and effectively as possible so the world is aware of it.

Graphene is an allotrope (form) of carbon consisting of a single layer of carbon atoms arranged in a hexagonal lattice. It is a semimetal with small overlap between the valence and the conduction bands (zero bandgap material). It is the basic structural element of many other allotropes of carbon, such as graphite, diamond, charcoal, carbon nanotubes and fullerenes.
