Aerodynamic characteristics of NACA 4412 airfoil section with flap in extreme ground effect

Aerodynamic characteristics of NACA 4412 airfoil section

A stall is a condition in aerodynamics and aviation wherein the angle of attack increases beyond a certain point such that lift begins to decrease. The angle at which this occurs is called the critical angle of attack. This critical angle is dependent upon the airfoil section or profile of the wing, its planform, its aspect ratio, and other factors, but is typically in the range of 8 to 20 ...

Stall (fluid dynamics) - Wikipedia

General characteristics Structure. The long root chord of the delta wing, and minimal structure outboard, make it structurally efficient. It can be built stronger, stiffer and at the same time lighter than a swept wing of equivalent lifting capability.

Delta wing - Wikipedia

This paper examines various aerodynamic optimisation methods. Benefits and drawback of architectures are discussed relating to aerodynamic optimisation.

State-of-the-art in aerodynamic shape optimisation methods

Boeing Commercial Airplanes offers airplanes and services that deliver superior design, efficiency and value to customers around the world.
