Wind against tide adjacent to the tidal stream so that the phrase normally used is reasonably accurate. For the western coast of the United Kingdom, swells generated at distant locations usually approach from the prevailing wind direction and so in this case, too, the swell may be aligned with the wind. When the tide first turns against the wind,

Why are the waves so much higher with 'wind against tide'?! « Reply #7 on: 10/08/2008 18:43:29 »
Logically it is not the strength of the wind that matters directly and, therefore, also not its direction (at least to a first order).
