∅ A chaotic system is a typical deterministic of nonlinear systems. ∅ It is a time evolution with sensitive dependence on initial conditions. ∅ It rejects the concept of discontinuity. What appears to be discontinuity is not an abrupt break with the past but the logical consequence of preceding events.

In his 1989 book An Introduction to Chaotic Dynamical Systems, Devaney defined a system to be chaotic if it has sensitive dependence on initial conditions, it is topologically transitive (for any two open sets, some points from one set will eventually hit the other set), and its periodic orbits form a dense set.
