En mathématiques, plus précisément en calcul différentiel, une équation aux dérivées partielles (parfois appelée équation différentielle partielle et abrégée en EDP) est une équation différentielle dont les solutions sont les fonctions inconnues dépendant de plusieurs variables vérifiant certaines conditions concernant leurs dérivées partielles.

En mécanique des fluides, les équations de Navier-Stokes sont des équations aux dérivées partielles non linéaires qui décrivent le mouvement des fluides newtoniens (donc des gaz et de la majeure partie des liquides [a]). La résolution de ces équations modélisant un fluide comme un milieu continu à une seule phase est difficile. L'existence mathématique de solutions des équations de ...

The mathematical term well-posed problem stems from a definition given by Jacques Hadamard. He believed that mathematical models of physical phenomena should have the properties that: a solution exists, the solution is unique, the solution's behavior changes continuously with the initial conditions.

General relativity (GR, also known as the general theory of relativity or GTR) is the geometric theory of gravitation published by Albert Einstein in 1915 and the current description of gravitation in modern physics. General relativity generalizes special relativity and Newton's law of universal gravitation, providing a unified description of gravity as a geometric property of space and time ...
