An experiment is a procedure carried out to support, refute, or validate a hypothesis. Experiments provide insight into cause-and-effect by demonstrating what outcome occurs when a particular factor is manipulated. Experiments vary greatly in goal and scale, but always rely on repeatable procedure and logical analysis of the results.

Charles S. Peirce randomly assigned volunteers to a blinded, repeated-measures design to evaluate their ability to discriminate weights. Peirce's experiment inspired other researchers in psychology and education, which developed a research tradition of randomized experiments in laboratories and specialized textbooks in the 1800s.

August 10, 2018-- Static testing is a particularly important aspect of experimental rocketry. Whether testing a new or modified motor design, or developing a new propellant, static testing is an "acid test" that provides priceless data that allows us to assess (sometimes dramatically) the fruit of our efforts.
