In this paper we will study the scalability issues of a SIMD stream architecture. We use a mesh network as the interconnection fabric and then use an on chip cache hierarchy to improve the performance. The contributions of this paper are: " We propose a multi-level cache design specially suited for stream processors.

Extending VLANs in the Data Center. This in itself creates the likelihood that the use of VLAN extension will also increase. 1RU switches also increase the number of uplinks required on the aggregation layer switch, which increases the number of STP logical and virtual ports on the aggregation layer switches.
