The second heat transfer process is convection, or heat transfer due to a flowing fluid. The fluid can be a gas or a liquid; both have applications in aerospace technology. In convection heat transfer, the heat is moved through bulk transfer of a non-uniform temperature fluid.

A variety of high-intensity heat transfer processes are involved with combustion and chemical reaction in the gasifier unit itself. The gas goes through various cleanup and pipe-delivery processes to get to our stoves. The heat transfer processes involved in these stages are generally less intense.

1. Define the following heat transfer situations as either conduction, convection, radiation, or a combination of the three. Please also clearly state what two objects the mode of heat transfer is between and the direction of heat transfer. For example: A person with a headache holds a cold ice pack to his/her forehead.
