The two-body problem in general relativity is the determination of the motion and gravitational field of two
bodies as described by the field equations of general relativity.Solving the Kepler problem is essential to
calculate the bending of light by gravity and the motion of a planet orbiting its sun. Solutions are also used to
describe the motion of binary stars around each other, and ...

Tests of general relativity serve to establish observational evidence for the theory of general relativity.The first
three tests, proposed by Einstein in 1915, concerned the "anomalous" precession of the perihelion of
Mercury, the bending of light in gravitational fields, and the gravitational redshift.The precession of Mercury
was already known; experiments showing light bending in line with ...
